

# DSM-IV & DSM-IV-TR:

## Posttraumatic Stress Disorder

When an individual who has been exposed to a traumatic event develops [anxiety](#) symptoms, reexperiencing of the event, and avoidance of stimuli related to the event lasting more than four weeks, they may be suffering from this [Anxiety Disorder](#).

### Diagnostic criteria for 309.81 Posttraumatic Stress Disorder

#### (cautionary statement)

A. The person has been exposed to a traumatic event in which both of the following were present:

- (1) the person experienced, witnessed, or was confronted with an event or events that involve threatened death or serious injury, or a threat to the physical integrity of self or others
- (2) the person's response involved intense fear, helplessness, or horror. **Note:** In children, this expressed instead by disorganized or agitated behavior

B. The traumatic event is persistently reexperienced in one (or more) of the following ways:

- (1) recurrent and intrusive distressing recollections of the event, including images, thoughts, or perceptions. **Note:** In young children, repetitive play may occur in which themes or aspects of trauma are expressed.
- (2) recurrent distressing dreams of the event. **Note:** In children, there may be frightening dream recognizable content.
- (3) acting or feeling as if the traumatic event were recurring (includes a sense of reliving the event, [illusions](#), [hallucinations](#), and dissociative [flashback](#) episodes, including those that occur on awakening or when [intoxicated](#)). **Note:** In young children, trauma-specific reenactment may occur.
- (4) intense psychological distress at exposure to internal or external cues that symbolize or resemble an aspect of the traumatic event
- (5) physiological reactivity on exposure to internal or external cues that symbolize or resemble an aspect of the traumatic event

C. Persistent avoidance of stimuli associated with the trauma and [numbing](#) of general responsiveness (not present before the trauma), as indicated by three (or more) of the following:

- (1) efforts to avoid thoughts, feelings, or conversations associated with the trauma
- (2) efforts to avoid activities, places, or people that arouse recollections of the trauma
- (3) inability to recall an important aspect of the trauma
- (4) markedly diminished interest or participation in significant activities
- (5) feeling of detachment or estrangement from others
- (6) restricted range of [affect](#) (e.g., unable to have loving feelings)
- (7) sense of a foreshortened future (e.g., does not expect to have a career, marriage, children, or a normal life span)

D. Persistent [symptoms](#) of increased arousal (not present before the trauma), as indicated by two (or more) of the following:

- (1) difficulty falling or staying asleep
- (2) [irritability](#) or outbursts of anger
- (3) difficulty concentrating
- (4) [hypervigilance](#)
- (5) exaggerated [startle response](#)

E. Duration of the disturbance (symptoms in Criteria B, C, and D) is more than 1 month.

F. The disturbance causes clinically significant distress or impairment in social, occupational, or other areas of functioning.

*Specify if:*

**Acute:** if duration of symptoms is less than 3 months

**Chronic:** if duration of symptoms is 3 months or more

*Specify if:*

**With Delayed Onset:** if onset of symptoms is at least 6 months after the stressor
